TOMARCHIO

History

Since 1920 our drinks are among the favorites in Sicily because they best represent the true and authentic taste of this wonderful island. They are prepared, now as in the past, using simple and genuine ingredients so as not to alter their unique and incomparable taste over time. Only the juices of the best freshly squeezed citrus fruits ripened in the hot Sicilian sun, the water coming from the slopes of Etna, rich in minerals with an inimitable taste, and finally an artisan production respecting the processing method jealously handed down for 100 years and three generations.

Our Citruses

A protected short-chain.

Our Tomarchio beverages not only tell the story of the tastes and scents of Sicily, but are also the result of important supply chain projects initiated with the entire citrus sector of the island.

From the collaboration with the Citrus Productive District and the main protection consortia (Arancia Rossa di Sicilia IGP, Limone di Siracusa IGP, Arancia di Ribera DOP) we started a path of requalification and specialization of the offer that led, in 2016, to the birth of an entire line of carbonated drinks with organic citrus juices IGP and DOP in order to ensure the traceability of the fruits used and to enhance the citrus heritage of the Island.

Our Water

From the highest volcano in Europe

The water used for our drinks originates from Mount Etna.

Rich in minerals and with a strong character, it gives our drinks a unique and inimitable taste.

Etna is the highest mountain on the island and the most active volcano in Europe.

Since June 2013, it has been classified as a UNESCO World Heritage Site.
